Occupational Therapy at The Children's Institute of Pittsburgh

At The Children's Institute, we provide rehabilitative care that is personalized and family-centered. Because we know that the key to long-term success is family participation and understanding, we focus on the needs of the patients and their caregivers. We incorporate families into our therapy sessions, promoting understanding, a sense of collaboration, and confidence. In our experience, this approach is key to our patients reaching their maximum potential and living the most fulfilling lives possible.

Our occupational therapists provide fun, positive and meaningful therapy activities, aimed at improved participation in school, leisure, family and community activities. We enable families to independently manage the health care challenges of their child and integrate them into daily life.

Occupational therapy may focus on:

- Community participation & social skills
- Activities of daily living (ADL) including dressing, hygiene, & feeding
- Upper body & core strengthening for improved function
- Upper limb treatment such as: splinting/casting/ kinesio-taping
- Fine motor & visual perceptual skill building
- Sensory processing challenges that impact daily function
- Coordination, timing & planning
- Provision of adaptive equipment
- Use of assistive technology in daily life

When you should refer:

- More than a six month delay in achieving age-appropriate developmental milestones in self-feeding, dressing, or play
- Limited fine motor and dexterity skills
- Limited hand-eye coordination
- Sensory processing skills that interfere with the child's ability to complete everyday child activities, such as: self-care, play, community participation
- Orthopedic or neurological conditions that require skill-building, special equipment or adaptations for the child to succeed in daily life
